Lalit Bhadouria

Mobile: +91-9997816222
Current Location: Greater Noida, India
Email: lalitbhadouriya@gmail.com

Certification ID: 77e89aae8bd843598beb649688a44e50 [Verification link]

Professional Synopsis:

- AWS Cloud Engineer with over 9+ years of experience in cloud orchestration, provisioning, and automation and migrating existing applications to AWS cloud, including planning, assessment, and execution.
- **Certified AWS solutions architect.**
- Automate cloud operations using IAC tools like provisioning, scaling with DevOps practices.
- Implement and maintain security policies on cloud environments, including access controls, encryption, and vulnerability management.
- Proficient in a wide range of AWS services:
    - EC2, Lambda, Step Functions SQS, SNS ,AWS connect, Lex, DynamoDB, Amazon RDS, Amazon Aurora ,VPC, CloudFormation,AWS Connect, S3 ,IAM, Secrets Manager, KMS, Hashicorp with Aws ,API Gateway, AWS IoT etc.
- Exports in Python programming and leveraging AWS solutions to design scalable, secure, and efficient cloud architecture. Driving information management strategy designed and deployed innovative and cost-effective Enterprise application and infrastructure for several international clients (FinTech: Lincoln financial group, Santander UK , **Health Care**: Johnson & Johnson Ethicon, **Packaging & Containers**: OEMSERV Hong Kong Ltd.).
- Extensive experience in **ETL framework** from scratch development and continuous deployment techniques for data pipeline with GitHub, GitLab CI/CD, Jenkins and containerization Docker.
- I am expert in Data structures, object-oriented design, algorithm, problem solving, and complexity analysis.
- Hands on experience with AWS Landing zone, Data Lake, ETL ,**Redshirt** , EMR , serverless orchestration deployment and docker containerization for different environments like **DEV, QA, UAT , PrePord, PROD** , Deep architectural understanding to ensure solutions are designed for successful deployment in the cloud and delivers the end objective.
- End-to-End IVR automation deployment on AWS.
- Hands on experience with complex **Multiprocessing** and **Multi-threading** system.
- Experienced with on-premises to cloud migration and disaster recovery management.
- experience in communicating to a variety of stakeholders including large enterprise customers, executive management, and engineering teams.
- Strong knowledge in designing various applications using UML diagrams, which includes Use case diagrams, sequence diagrams, activity diagrams, component diagrams and deployment diagrams.

Technical Stack Worked

Containerization Tools	Docker
IAAC Tools	Cloud Formation,CDK,pulumi , hashicorp terraform
Cloud Technologies	AWS, Azure , Hashicorp
Continuous Integration tools	GitLab runner , Jenkins, AWS CodeCommit, CodePipeline , CodeDeploy , GitHub action
Programming Language	Python3.x, C++, NodeJS , Bash , Go
Repository	GitLab, GitHub, DockerHub ,Bitbucket
Domain Knowledge	FinTech, Retail, Health Care, R&D ,Packaging & Containers
DBMS	Oracle , MySQL, NoSQL, time series DB (influxeDB)
Tools	VScode, Postman, Oracle SQL Developer,PyCham ,Vim, bruno

Methodologies	Agile (JIRA/V1), DevOps , Waterfall
Others	ETL , OOPS, algorithms implementation, QT,Data extraction, Event drive technology, Monitoring and troubleshooting, Automated Unit testing, Low/High Level programming, Automate Devices provisioning, AOI , IoT ,Gerber viewer , Hadoop,Hive,Presto,Redshift , EMR, hashicorp HCP valur , hashicorp terraform,etc

Experience -Coforge (March 2022- Till now)

Project#1	
Project Description	**Contact center (IVR)- Santander** UK's contact center is a pivotal part of their customer service operations, providing support and assistance to customers across various channels, including IVR, email, and chatBot. Here's an overview of services from Santander UKs as a contact center to Customer.**/Multi-Channel Support/IVR System/Continuous Improvement**
Client	Santander Uk
Visa Status	**Not required**
Technologies used	security group, Serverless Lambda, VPC ,Gateway,AWS Connect ,Lex bot ,S3 , SQS ,SNS , API gateway , Dynamodb , Cloudformation, IAM , Policy , VPC , KMS, Event Mapping ,Python3.12, Go , Make,CI/CD, Docker, ODS, Aurora , NoSQL,HCP valut ,step function..Github action , terraform.
Duration	March 2022– till now
Role	Senior Cloud engineer

Responsibilities:

- Designing and implementing conversational interfaces with AWS Lex for chatbots and voicebots.
- Setting up and configuring AWS Connect contact center solutions for customer interactions.
- Developing serverless applications and microservices using AWS Lambda.
- Designing and implementing NoSQL database solutions with DynamoDB.
- Designing and developing RESTful APIs using AWS API Gateway.
- Integrating AWS Lex, AWS Connect, Lambda, DynamoDB, and API Gateway for end-to-end solutions.
- Monitoring system performance, resource utilization, and health service using AWS CloudWatch.
- Automate infrastructure provisioning on multiple cloud providers (AWS and Azure) using IAAC tool and implementing CI/CD pipelines for different environments (DEV , QAT , UAT ,PreProd).
- Extensively Worked on JIRA and Confluence for creating Epics, stories, tasks and Documentation.
- Worked on creating and maintaining fully automated CI/CD build and release process for code deployment using GitHub Action.
- Worked on MS Visio for all project related diagrams and charts.
- Managed Git repositories and permissions, including branching and tagging.

Experience -Coforge (Jan 2021– March 2022)

Project#2	
Project Description	**LIFEIQ-** LifeIQ is a data platform. LifeIQ enables Lincoln to centrally store and manage all data related to the company's Life Insurance business in an integrated, highly secure, governed environment. LifeIQ provides business users with access to up-to-date information on-demand, making it easier to analyze data, extract actionable insights, and make more-informed business decisions on matters ranging from product development to customer experience.
Client	Lincoln financial group
Visa Status	**Not required**
Technologies used	security group, Gateway,Glue ,S3 , SQS ,SNS , Serverless Lambda , Dynamodb , cloudformation, IAM , Policy , VPC , KMS, Event Mapping, Python3.8, Go , Make,CI/CD, Docker, ODS, Aurora , ETL, NoSQL.
Duration	Jan 2021– March 2022
Role	Senior Cloud engineer

Responsibilities:

- Designed and edited blueprints for IT infrastructure and networking architecture according to management's demands and migrating applications to the cloud.
- Monitored existing infrastructure and architectural frameworks for performance and made changes and updates when necessary.

- Ensure solutions are fault tolerance proof, cost effective designed and high availability for successful deployment in the cloud and delivers the end objective.
- Automate infrastructure provisioning on multiple cloud providers (AWS and Azure) using IAAC tool and implementing CI/CD pipelines for different environments (DEV , QAT , UAT ,PreProd).
- End to end Integration serverless development to manage Events drive data from another Platform.
- Creates Data pipelines to delivered Extracted Data from centralize Database to another system.
- Extensively Worked on V1 and Confluence for creating Epics, stories, tasks and Documentation.
- Worked on creating and maintaining fully automated CI/CD build and release process for code deployment using Gitlab runner.
- Worked on MS Visio for all project related diagrams and charts.

Experience: **ACOUSTIC ARC INTERNATIONAL LIMITED (AAi) Oct 2019 – Jan 2021**

Project#1	
Project Description	**IT2008 2nd generation Dashboard:** IoT dashboard within an IoT platform that enables users to monitor and interact with connected devices though graphs, charts and other tools and UI elements, advanced IoT analytics visualization, analytics rules, and smart alerts, Simultaneously IoT data visualization dashboard (web Application) for Fully Automated KIOSK (Kommunikasjon Integrert Offentlig Service Kontor) IOT machine Based on 64-bit Linux.
Visa Status	**Visa sponsorship to China**
Technologies used	AWS : Glue , Iot Core , IoT device manager , automation IoT provisioning, S3 ,Lambda , aurora postgre , Docker ,Python3.6 , Git, Bash,Nodejs , CI/CD , architecture provisioning
Client	Ethicon (J&J)
Duration	Oct 2019 – Jan 2021
Role	software engineer
Responsibilities • Ensure solutions are fault tolerance proof , cost effective designed and high availability for successful deployment in the cloud and delivers the end objective. • Design and deploy end-to-end dashboard Application for KIOSK Simultaneously IoT data visualization. • Extensively Worked on JIRA and Confluence for creating Epics, stories, tasks and Documentation. • Worked on creating and maintaining fully automated CI/CD build and release process for code deployment using Gitlab runner. • Worked on MS Visio for all project related diagrams and charts. • Managed Git repositories and permissions, including branching and tagging.	
Project#2	
Project Description	**AITA**: A data-driven solution extracting data through automated picking and staging units, transforming routine data points into actionable insights, and optimizing decision making with a descriptive analytics platform and fully-automated product storage and staging system that unlocks a data-driven insights engine to provide customer value
Technologies used	AWS : Glue , Iot Core , IoT device manager , automation IoT provisioning , S3 ,Lambda , SQL, Docker ,Python3.6 , Git, Bash, CI/CD , architecture provisioning.
Visa Status	**Visa sponsorship to China**
Client	Ethicon (J&J)
Hardware	Jetson tx2 Nvidia and PI4
Duration	Oct 2019 – Jan 2021
Role	software engineer
Responsibilities • Manage design and deploy event driven architecture for Simultaneously IoT data driven. • Build and deploy multi-threading and multiprocessing architecture Applications, Research and Development (R&D). • Actively manage, improve, and monitor cloud infrastructure on AWS, SQS, and RDS, including backups and scaling. • Design and deploy end-to-end Application for KIOSK. • Monitored existing infrastructure and architectural frameworks for performance and made changes and updates when necessary. • Ensure solutions are fault tolerance proof, cost effective designed and high availability for successful deployment in the cloud and delivers the end objective.	

- Automate infrastructure provisioning on multiple cloud providers (AWS and Azure) using IAAC tool and implementing CI/CD pipeline for different environments (DEV , QAT , UAT ,PreProd).
- End to end Integration serverless development to manage Events drive data from another Platform.
- Creates Data pipelines to delivered Extracted Data from centralize Database to another system.
- Extensively Worked on V1 and Confluence for creating Epics, stories, tasks and Documentation.
- Worked on creating and maintaining fully automated CI/CD build and release process for code deployment using Gitlab runner.
- Worked on MS Visio for all project related diagrams and charts.
- Managed Git repositories and permissions, including branching and tagging.

OEMSERV Hong Kong Ltd. (Mar 2019 – Oct'2019)

Project#1	
Client	OEMSERV Hong Kong Ltd.
Project Description	**QC-In-line:** A artificial intelligence In-line automation machine that can control product Quality and report issue to manufacturer.
Visa Status	**Visa sponsorship to China**
Technologies used	Python3.8,opencv3.6.1 , SQL Server, AWS, Iot core , JITR , Glue , S3 , SQS ,SNS , Lambda , GIT Hub, C++
Duration	June 2016 – Oct 2017
Role	Software engineer

Responsibilities

- Ensure solutions are fault tolerance proof , cost effective designed and high availability for successful deployment in the cloud and delivers the end objective.
- Automate infrastructure provisioning on multiple cloud providers (AWS and Azure) using IAAC tool and implementing CI/CD pipeline for different environments (DEV , QAT, UAT ,Prod).
- code/build and deployed a 2D Computer Vision In-line automation machine multi-threading,
- multiprocessing Desktop Application based on 64-bit windows platform (production Quality Control inspection machine Application) that can find errors in dunnage bags, strapping belts, dynamic load metal buckle and many other cargos securing product using Opencv 3.4 C++ 11, No-SQL Redis, Bash script, Visual studio19.
- Write algorithms feature recognition and segmentation, Object and edge detection, Low/High programming. Digital image Processing, Git version control, Bash scripting and simulation scripting, Responsible for overall product development of project, Write Application process flow diagram and design and documentation Handling, Research and Development (R&D).

Guangdong VDR Technology (Aug 2016 – Mar 2019)

Project#1	
Project Description	AOI **(Automated optical inspection) machine:** A automated optical inspection (AOI) is an automated visual inspection of printed circuit board (PCB) (or LCD, transistor) manufacture where a camera autonomously scans the device under test for both catastrophic failure and quality defects.
Technologies used	Python3.6 , C++ , Algorithms, S3 , SQS, SNS , QT , Git Hub , Opencv.3.4.2
Visa Status	**Visa sponsorship to China**
Duration	Aug 2016 – Mar 2019
Role	Software Developer

Responsibilities

- Write Digital 2D image processing Algorithms for automated optical inspection (AOI system) defects
- like (Breakout, Pin hole, Open circuit, under etch, Mouse-bite, Spur, Short, Wrong size hole, Conductor to close, missing hole, over etch) using C++ 11/17, Python3.5, QT creator 5.10, 64-bit Linux (Ubuntu 16), Research and development.
- Image enhancement Algorithms like Image histogram, Inpainting, Histogram equalization, Tone mapping, Gamma correction, Anisotropic diffusion (Persona Malik equation).
- Working with 2D image Transformations like Hough transform, Walsh Hadamard transform and line detection,
- Feature extraction on image like Active contour, Blob detection, Canny edge detector, Contour detection, Edge detection.

Aditya Birla Group (Feb 2016 - Aug 2016)

Project#1	
Project Description	**Grand:** Aditya Birla Group entered the retail industry with the acquisition of Trinethra Super Retail in 2007
Technologies used	Python3.6, Excel , Windows, L1 ,L2 , Networking, ODBC
Visa Status	Not required
Duration	Aug 2016 – Mar 2019
Role	Software Developer

Responsibilities

- Hyper market sale data analysis
- Manage all embedded Windows systems.
- Hardware inventory, Network installation wifi router installation system and embedded systems installation, Network configuration.
- Paytm payment panel data analysis.
- Mange all severs L1/L2 server and domain servers
- SQL servers and databases data analysis as well as ODBC data analysis..

Education

- Master computer application From Rustamji Institute of Technology (Grad-7.8/10) - 2016
- Bachelor of computer application From MCU University(Grad-6.6/10) - 2013
- Senior Secondary from MP state Board -2010
- BDCH from Rajmata vijayaraje scindia college - 2009
- Secondary from MP state Board- 2007

ADDITIONAL INFORMATION

Nationality: Indian

Date of birth: 15th Dec 1991

language: English, Basic Chinese, Basic French
